

(B) service, wherein at least some displayed data is updated with data transmitted over the network by the computer system without the user requesting any updates.

---

21. (Amended) An article of manufacture storing a computer program for providing a computer interface facilitating user-to-user security trading service for users communicating over a network with a computer system, the interface comprising: (a) a computer display of orders to buy certain securities at different prices based on data transmitted over the network by at least some of the users of the service; and (B) (b) a computer display of offers to sell the certain securities at different prices based on data transmitted over the network by at least some of the users of the service, wherein at least some displayed data is updated with data transmitted over the network by the computer system without the user requesting any updates.

---

48. (Amended) A computer program providing a real-time trading environment to a user communicating with at least one trading system over the Internet from a user workstation, comprising: software resident at the workstation and receiving over the Internet, interpreting, and displaying as non-overlapping simultaneously displayed windows at least the following data: a) data relating to price quotes for securities, b) data relating to account balances, c) data relating to news items regarding securities, and d) data relating to user's position in securities, wherein the program further comprises means for receiving updates to the price quotes for at least one security without the user requesting each of the updates and means for displaying an updated quote to the user.
